

 PORSCHE 911 GT2

 'TITAN-SPORTS' EXHAUST SYSTEM

The ultimate Sports Exhaust system for the Porsche 911 GT2.

The QS Titanium 'Titan-Sports' system is almost a half the weight of the standard exhaust. This is a remarkable weight saving. Importantly we remove weight off the very rear of the car so it has a profound benefit to the balance and all aspects of performance.

The Quicksilver system is designed to enhance flow and throttle response while emitting an engineered sound that will rise in pitch with revs. This allows for an acceptable yet sporty sound while driving at lower speeds i.e. built up areas or constant engine speeds i.e. long motorway journeys.

The welding techniques employed on this system are exceptionally precise, optimizing internal flow at the 'X-Pipe' which balances the exhaust pulses from both banks to create a smoother tone and greater variation in pitch.

The bracket configuration also adds stability and strength to the systems design which will minimise vibration for long term durability.

 WEIGHT

Original System 5 kg (11.0231 lbs)

QuickSilver 2.8 kg (6.17294 lbs)

Superior Exhausts for the World's Finest Cars

PORSCHE 911 GT2

KEY FEATURES

- ✓ Built from Titanium.
- ✓ Superlight weight and improved flow enhance ALL aspects of performance!
- ✓ Fully mandrel bent, made by hand in the UK.
- ✓ Light weight makes it easier to fit, reducing time and effort.
- ✓ Uses OE tail pipes to keep original Porsche styling.
- ✓ Internal balance Intergrates pulses from both banks.
- ✓ Purposeful sound - deep at low speed rising in pitch & volume with rpm and throttle position.

The Titanium welds achieved on this QuickSilver System are exceptionally smooth and clean.
