Mesh Front Grill Sets For; 996 / 997, GT3, Boxster & Cayman (can also apply to other models)

- 1, Remove side indicators & remove retaining screws behind.
- 2, Remove plastic trim panel around the lower lock underneath the bonnet.
- 3, Remove the retaining screws along the front edge of the front bumper
- 4, Remove the screws along the under part of the bumper attached to the under tray.
- 5, Loosen the bumper end away from the black front wheel arch inner liner to access the hidden screw vertically securing the wing to the bumper. (repeat on both sides)
- 6, Un-plug air sensor from the right hand air vent and remove bumper.
- 7, Unclip vent plastic trim around apertures, Note; this part is not on GT3 models!
- 8, Place the mesh pieces into the respective vents and form neatly around the edges.
Note; It is advised at this point to have a piece of carpet or soft cloth to rest the panel on.
- 9, Once in place use the silicone sealant between the mesh & vent surround.
- 10, Once the sealant is applied it may be advisable to rest a heavy object on the grill to hold it in place while the sealant sets (allow a minimum of 2-3 hours before attempting re-assembly, ideally over night)
- 11, Once the sealant has set re-fit the bumper allowing 8-12 hours before using the car at speed.
